MAGIX

VIDEO PRO X5
New highlights in detail

Performance

New proxy editing mode
Edit HD material as easily as DV material. Using the new proxy editing feature Video Pro X5 creates an easily editable version of the original video file either automatically or manually. This provides smooth navigation on less powerful computers or when working with long GOP files. The software will run smoothly even if the computer is overloaded with realtime effects, multitrack constructs etc. The new extra options in the video monitor for deactivating effects and plugins, and reducing frame rate or resolution mean the program's behavior can be further customized. Video Pro X5 reuses the original files when exporting. A shining example of how to combine optimal workflows with first rate output quality.

Optimized 3D support
The integration of Intel Media SDK means that MAGIX Video Pro X5 has much better support for MVC files and all current 3D camcorders.

Look & Feel

Optimized toolbar in the timeline
In response to customer feedback the toolbar in the timeline has been redesigned to optimize the workflow. The most important mouse modes are now accessible with a single click, making the editing process faster and more efficient while saving time and mouse movement.

Optional guides
Theses guides help you navigate and maintain your orientation within the timeline. In MAGIX Video Pro X5 they can be switched on or off depending on your requirements.

New render dialog
MAGIX Video Pro X5 now offers a central graphical progress monitor which displays the most important information, from disk space, to the amount of data exported right through to how much time is remaining. The render dialog is also gleaming with tons of new features. There is now the option to automatically shut down your computer, so the dialog can be minimized while rendering. Even pausing is now possible, allowing other processes to make full use of the computer's power if necessary.

Professional effect plugins

Including NewBlueFX ColorFast: High-quality color correction:
NewBlue ColorFast is an integrated plugin that combines professional color correction with detailed color grading into a single workflow. The "Spectra Color Isolation" technology allows precise control of color adjustments either in particular sections or in the entire video image.

Including broadcast quality titles: NewBlueFX Titler EX
NewBlue Titler EX is a professional level title creation plugin. Ease-of-use combined with impressive lighting effects and textures guarantee the perfect look for your movie.

NEW! Reduce video noise and grain: Neat Video
By supporting the separately available plugin "Neat Video" Video Pro X5 makes use of the most efficient filter for removing video noise available. Neat Video effectively reduces the following kinds of noise: sensor noises produced by digital video capturing devices such as camcorders and DSLR's, grain visible in digitized movies or analog videos, compression artifacts and more.
